QUESTION 1

A developer created a trigger on the Account object and wants to test if the trigger is properly bulkified. The developer team decided that the trigger should be tested with 200 account records with unique names.

What two things should be done to create the test data within the unit test with the least amount of code? Choose 2 answers

- A. Use the `@isTest(isParallel=true)` annotation in the test class.
- B. Use `Test.loadData` to populate data in your test methods.
- C. Use the `@isTest(seeAllData=true)` annotation in the test class.
- D. Create a static resource containing test data.

Correct Answer: BD

QUESTION 2

A `Licensed_Professional__c` custom object exists in the system with two Master-Detail fields for the following objects: `Certification__c` and `Contact`.

Users with the “Certification Representative” role can access the `Certification` records they own and view the related `Licensed Professionals` records, however users with the “Sales Representative” role report they cannot view any `Licensed`

`Professional` records even though they own the associated `Contact` record.

What are two likely causes of users in the “Sales Representative” role not being able to access the `Licensed Professional` records? (Choose two.)

- A. The organization's sharing rules for `Licensed_Professional__c` have not finished their recalculation process.
- B. The organization recently modified the Sales representative role to restrict Read/Write access to `Licensed_Professional__c`
- C. The organization has a private sharing model for `Certification__c`, and `Contact` is the primary relationship in the `Licensed_Professional__c` object
- D. The organization has a private sharing model for `Certification__c`, and `Certification__c` is the primary relationship in the `Licensed_Professional__c` object.

Correct Answer: AC

QUESTION 3

A developer creates a custom controller and a custom Visualforce page by using the code block

below:

```
public class MyController {  
    public String myString {  
        get {  
            if (myString == null) { myString = \"a\";  
            }  
            return myString;  
        } private set; } public string getMyString () {  
            return \"getMyString\";  
        } public string getStringMethod () {  
            if (myString == null) {  
                myString = \"b\";  
            } return myString;  
        }  
    } {!StringMethod}, {!myString}, {!myString}
```

What can the user expect to see when accessing the custom page?

- A. A, a, a
- B. B, b, b
- C. A, b, getMyString
- D. B, a, getMyString

Correct Answer: A

QUESTION 4

Which action causes a before trigger to fire by default for Accounts?

- A. Renaming or replacing picklist
- B. Importing data using the Data Loader and the Bulk API
- C. Converting Leads to Contact accounts
- D. Updating addresses using the Mass Address update tool

Correct Answer: B

QUESTION 5

What is the advantage of Salesforce Lightning?

- A. Uses service side for better handling
- B. Option 4
- C. Pre-defined components to give Standard Look and Feel
- D. Option 3

Correct Answer: C

QUESTION 6

When can a developer use a custom Visualforce page in a Force.com application? (Choose 2)

- A. To generate a PDF document with application data
- B. To create components for dashboards and layouts
- C. To deploy components between two organizations
- D. To modify the page layout settings for a custom object

Correct Answer: AB

QUESTION 7
