- ⚙️ **365 Days** Free Update
- ⚙️ **800,000+** Satisfied Customers

QUESTION 1

Which of the following ROADM boards have WSS optical modules?

- A. RDU9
- B. WSM9
- C. WSMD9
- D. WSD9

Correct Answer: B

QUESTION 2

The protocols used in ASON are RSVP-TE, CSPF-TE, and LMP.

- A. True
- B. False

Correct Answer: A

QUESTION 3

In the scenario where the non-convergence OTU processes OTN standard signals, both A and B are WDM sites. The OTU at station A accesses four channels of R_LOS signals on the client side. After being processed in the middle part and on the WDM side of the OTU at station A, the alarm signals are then sent to station B. The ODUK_PM_AIS alarm of the corresponding channel is generated in the middle part of station B. The ODUK_PM_AIS alarm is detected in the client device.

- A. True
- B. False

Correct Answer: B

QUESTION 4

If tunnel APS is configured for the tunnel to which the PW belongs, PW APS cannot be configured for the PW.

- A. True
- B. False

Correct Answer: B

QUESTION 5

Which of the following is not included in an ASON network?

- A. ASON Domain
- B. ASON NE
- C. SC
- D. TE Link

Correct Answer: D

QUESTION 6

The OD system monitors the main optical path performance in each optical multiplexing section (OMS), which of the following items are monitored?

- A. whether the line loss exceeds the design end of life (EOL) value
- B. whether a fiber cut occurs on the main optical path.
- C. whether the optical power of the transmit-end OA board is out of the permitted range.
- D. whether the line loss compensation is out of the permitted range.

Correct Answer: B

QUESTION 7

Which of the following methods can be used to analyze faults in the NG WDM system?

- A. Loopback
- B. Service Signal Flow Analysis
- C. RMON
- D. Replacement

Correct Answer: D

QUESTION 8

Which of the following functions is added to EX40 compared with X40?

- A. Monitors the optical power of a single channel.
- B. Supports optical-layer cross-connections.

- C. Fewer slots are occupied.
- D. More multiplexed and demultiplexed wavelengths

Correct Answer: D

QUESTION 9

In the scenario where the non-convergence OTU processes OTN standard signals, both A and B are WDM sites. After receiving the OTUK_TIM alarm on the client side, the OTU board at station A sends the OTUK_BDI alarm to the upstream. When the TIM follow-up action is disabled, the alarm is no longer transmitted to the downstream. When the TIM follow-up action is enabled, an SF event is generated. The WDM side of the OTU board at station B reports the ODUK_PM_AIS alarm, and the ODUK_PM_AIS alarm is transmitted downstream. The client equipment reports this alarm. After the WDM side of the OTU board at station B receives the OTUK_TIM alarm and the TIM follow-up action is disabled, the alarm is no longer transmitted to the downstream. When the TIM follow-up action is enabled, an SF event is generated. After the client side of station B processes the SF event, the client equipment reports the ODUK_PM_AIS alarm.

- A. True
- B. False

Correct Answer: A

QUESTION 10

Which of the following is not a precaution after board replacement?

- A. Record the settings of jumpers and DIP switches on the board.
- B. /For functional units that have backups, check whether the switchover is normal.
- C. Check the indicator blinking status of the board and ensure that the board works properly.
- D. Ensure that no abnormal alarm.

Correct Answer: D

QUESTION 11

Which of the following monitoring boards do not support 1588v2 signal processing and transparent transmission?

- A. AST2
- B. SC2
- C. ST2
- D. SCI

Correct Answer: C

QUESTION 12

Which of the following statements about the electrical-layer overhead processing - source function are correct?

- A. The OPUk performs client signal mapping, frequency adjustment, and rate adaptation in the transmit direction.
- B. The ODUkT calculates the BIP-8 and writes the it into the TCMi.
- C. OTUk calculates BIP-8 and writes it into SM, GCCO, FAS, and MAFS.
- D. The ODUkP calculates overheads such as BIP-8, PM, and GCC1/2.

Correct Answer: C

QUESTION 13

The OSN 1800V supports the following packet protection features:

- A. Tunnel APS
- B. LAG
- C. TPS
- D. PW APS

Correct Answer: A

QUESTION 14

Which of the following signals can be used as input or output signals of an external clock interface?

- A. 2.048 MHz
- B. 2.048 Mbit/s
- C. 155 Mbit/s
- D. 34 Mbit/s

Correct Answer: C

QUESTION 15

Before the optical power commissioning of an ROADM board, you need to configure virtual optical-layer services. Otherwise, the ROADM board blocks all wavelengths by default.

- A. True

B. False

Correct Answer: A
