QUESTION 5

Exhibit.

You are attempting to set up VRRP with R1 and R2 being participating members. You want R1 to be the master router

and R2 to be the backup router with the virtual router they create being at address 172.25.100.1. The virtual router is not pinging from either User A or User B.

Referring to the exhibit, what must be done to correct the problem?

- A. The VRRP group value on R1 and R2 must match.
- B. A VRRP authentication type value is needed on R1 and R2.
- C. A VRRP policy is needed on R1 and R2.
- D. The VRRP priority value on R1 and R2 must match

QUESTION 6

You were provided a network diagram that told you to number your network from the 191.255.0.0/16 space. OSPF is enabled and adjacencies are up, but no routers are learning any routes. What can explain this?

- A. The default OSPF export policies advertise nothing, so you need to apply export policy
- B. The default OSPF import policy rejects all OSPF routes, so you need to apply import policy
- C. You need to modify the routing table with a 191.255.0.0/16 accept statement
- D. You need to enable OSPF on the lo0 interface to provide a route to the RID of each router in the network

Correct Answer: C

QUESTION 7

You do not want any spanning tree protocols operating in your environment, and you want to ensure that no BPDUs can be introduced into the environment.

Which statement is true in this scenario?

- A. You must run a spanning tree protocol to block BPDUs.
- B. Incoming BPDUs are blocked by default if a spanning tree protocol is not operating.
- C. You can block BPDUs without running a spanning tree protocol using Layer 3 control.
- D. Incoming BPDUs can only be blocked by the root bridge.

Correct Answer: C

QUESTION 8

- B. OSPF
- C. IS-IS
- D. BGP

Correct Answer: A
